FOREWORD

This final bibliography supersedes and replaces the following quarterly bibliographies:

CSR-469(9990)QBR-1	dated 30 November 1964
CSR-469(9990)QBR-2	dated 30 January 1965
CSR-469(9990)QBR-3	dated 30 April 1965
CSR-469(9990)QBR-4	dated 31 July 1965

This bibliography lists all reports published during the period 1 July 1964 through 30 June 1965 under Contract AF 04(695)-469, in accordance with the requirements of SSD Exhibit 64-1. Reports whose identification is prohibited by their sensitive nature are listed by report number only. Reports initiated and written under this contract are identified by the inclusion of the "469" element in the report number; reports initiated under previous contracts--but reissued or added to by supplements or volumes under this contract--are identified by the same report number (with an appropriate modifying designation) as the parent report (see Section I).

Section I

AEROSPACE CORPORATION REPORT NUMBERING SYSTEM

SSD Exhibit 64-1 (1 July 1964) establishes the contractual requirements for reports generated by Aerospace Corporation on programs under Air Force Systems Command cognizance. This exhibit defines the various types and categories of reports, standardizes formats and other necessary practices, and directs the contractor as to his privileges in exchange of reports.

Basically, Exhibit 64-1 provides for professional papers and three main categories of reports:

1. Contract Status Reports (CSR) (program progress reports, red flag reports, bibliography reports)
2. Technical Operating Reports (TOR) (flight and other types of test data, detailed test objectives, engineering analyses, etc.)
3. Technical Documentary Reports (TDR) (scientific and technical records of research and development efforts, may be definitive or exploratory, factual or problematical, general or specific)
4. Professional Papers (PP) (articles which identify the author as an employee of Aerospace and which are prepared for possible publication in non-profit scientific and professional journals and/or for presentation).

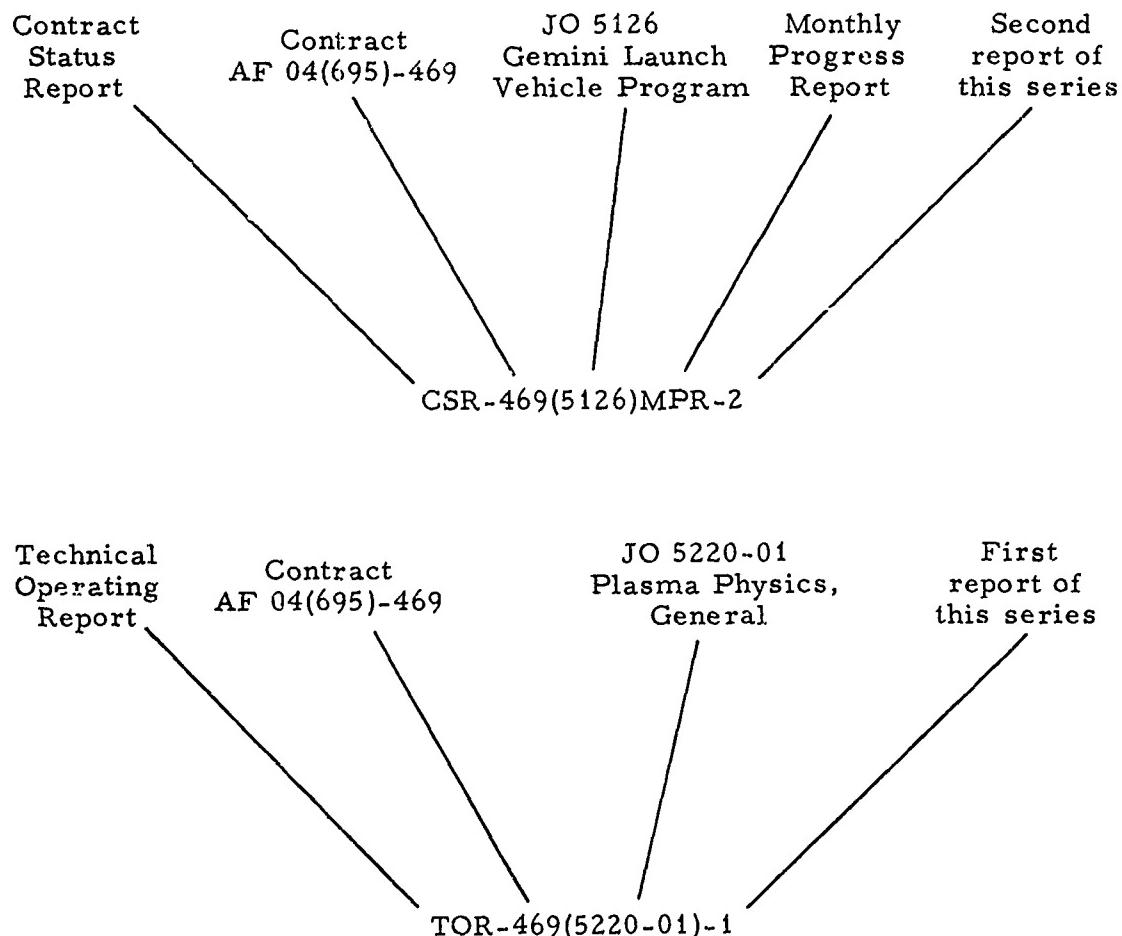

The Aerospace report numbering system is designed for compatibility with the requirements of Exhibit 64-1, and to provide report numbers that have a definite significance and meaning for identification, collection, storage, and retrieval purposes. This numbering system incorporates five significant factors:

1. Letter symbols indicating the type or category of the report (e.g., CSR, TOR, TDR).
2. A number representing the contract [e.g., -469 represents Contract AF 04(695)-469]. *

* Reports initiated under previous contracts (e.g., AF 04(695)-169, -269) but reissued, or added to by supplements or volumes, under the present contract include the previous contract element (e.g., "-169", or "-269") in the report number (see Section VII).

3. Job Order numbers indicating the task or project for which the report is prepared.**
4. Letter symbols designating the series which the report represents (e. g., MPR, Monthly Progress Report; MS, Monthly Summary).
5. A number indicating the sequence of the report within its series (e. g., -1, -2, -3, etc.).

Examples of Aerospace Report Numbers

* The letter A or S preceding the Job Order number indicates a report originated by Eastern Test Range or the San Bernardino Operations, respectively.

Section II

ORGANIZATION OF BIBLIOGRAPHY

Information listed in the bibliography is sectionalized in five categories:

1. Contract Status Reports
2. Technical Operating Reports
3. Technical Documentary Reports
4. Professional Papers
5. Other Reports.

Page entries contain the following information:

1. Aerospace report number
2. Title
3. Author
4. Publication date
5. Classification - Security classification codings used are TS (Top Secret), S (Secret), C (Confidential), U (Unclassified), RD (Restricted Data). In addition, reports classified as limited distribution by Aerospace Corporation are coded LD.

Professional Paper entries contain the following information:

1. Title of report
2. Journal in which published, or meeting at which paper presented.
3. Author
4. Clearance date of paper
6. Classification.

In this bibliography, Aerospace Corporation reports grouped in each sectional category are listed in numerical order by Job Order number and by series (see Section I). To facilitate use of these sequential listings, a Job Order Index, identifying Job Order numbers with major subject areas, is included in this section. Subject areas whose identification is prohibited by their sensitive nature are listed by Job Order number only. Professional Papers are listed by the authors' names in alphabetical order. In addition, the Professional Paper section contains a listing of papers for which reprints are available.
